What is a seed library?

A **seed library** is an institution that lends or shares seeds. Seed libraries are designed to promote gardening and develop seeds that can become acclimated to our local climate.

Why have a garden?

By gardening, you can learn new skills, know where your food comes from, build soil and give life to the lawn, save seed to build local resilience and genetic diversity, and enjoy a highly nutritious diet.

How do you check out seeds?

Check seeds out at the County Main Library or any of the branch libraries.

Use your library card to check out up to three seed packets each month, and they are yours to keep. Library cards are free to all Leon County residents, students, and property owners. Apply for a card online or in person at any library.
